Background:	This gene encodes a member of the PVR (poliovirus receptor) family of immunoglobulin proteins. The product of this gene is expressed on several classes of T cells including follicular B helper T cells (TFH). The protein has been shown to bind PVR with high affinity; this binding is thought to assist interactions between TFH and dendritic cells to regulate T cell dependent B cell responses. HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY TIGIT ([RC221447], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-TIGIT (1:1000).

Flow cytometric analysis of living 293T cells transfected with TIGIT overexpression plasmid ([RC221447]), Red/empty vector ([PS100001], Blue) using anti-TIGIT antibody ([TA812550]). Cells incubated with a non-specific antibody (Green) were used as isotype control (1:100).
