Scheme EFHD1 Mouse Monoclonal Antibody [Clone ID: OTI2B9] – TA812751M

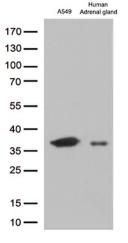

Background:

This gene encodes a member of the EF-hand super family of calcium binding proteins, which are involved in a variety of cellular processes including mitosis, synaptic transmission, and cytoskeletal rearrangement. The protein encoded by this gene is composed of an N-terminal disordered region, proline-rich elements, two EF-hands, and a C-terminal coiled-coil domain. This protein has been shown to associate with the mitochondrial inner membrane, and in HeLa cells, acts as a novel mitochondrial calcium ion sensor for mitochondrial flash activation. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Jul 2016]

Synonyms: MST133; MSTP133; PP3051; SWS2

Equivalent amounts of cell lysates (30 ug per lane) of wild-type HeLa cells (WT) and EFHD1-Knockdown HeLa cells (KD) were separated by SDS-PAGE and immunoblotted with anti-EFHD1 monoclonal antibody [TA812751] (1:500). Then the blotted membrane was stripped and reprobed with anti-HSP90AA1 antibody as a loading control.

Western blot analysis of extracts (35ug) from 1 cell line and 1 tissue lysates by using anti-EFHD1 monoclonal antibody (1:250).
