Cathepsin L (CTSL) Mouse Monoclonal Antibody (HRP conjugated) [Clone ID: OTI2C10] – TA812843BM

Background:The protein encoded by this gene is a lysosomal cysteine proteinase that plays a major role in
intracellular protein catabolism. Its substrates include collagen and elastin, as well as alpha-1
protease inhibitor, a major controlling element of neutrophil elastase activity. The encoded
protein has been implicated in several pathologic processes, including myofibril necrosis in
myopathies and in myocardial ischemia, and in the renal tubular response to proteinuria.
This protein, which is a member of the peptidase C1 family, is a dimer composed of disulfide-
linked heavy and light chains, both produced from a single protein precursor. Multiple
alternatively spliced transcript variants have been found for this gene. [provided by RefSeq,

Synonyms:	CATL; CTSL1; MEP
Protein Families:	Druggable Genome, Protease
Protein Pathways:	Antigen processing and presentation, Lysosome

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY CTSL ([RC203143], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-CTSL (1:500). Positive lysates [LY400711] (100ug) and [LC400711] (20ug) can be purchased separately from OriGene.
