	Papillary renal cell carcinoma (PRCC) Mouse Monoclonal Antibody (Biotin conjugated) [Clone ID: OTI5H7] – TA812966AM
Background:	This gene encodes a protein that may play a role in pre-mRNA splicing. Chromosomal translocations (X;1)(p11;q21) that result in fusion of this gene to TFE3 (GeneID 7030) have
	been associated with papillary renal cell carcinoma. A PRCC-TFE3 fusion protein is expressed

in affected carcinomas and is likely associated with altered gene transactivation. This fusion protein has also been associated with disruption of the cell cycle. [provided by RefSeq, Aug 2010]

Synonyms: RCCP1; TPRC

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY PRCC (Cat# [RC203805], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-PRCC (Cat# [TA812966]). Positive lysates [LY416956] (100ug) and [LC416956] (20ug) can be purchased separately from OriGene.

Western blot analysis of extracts (35ug) from 8 different cell lines by using anti-PRCC monoclonal antibody (1:500).
