# Product datasheet for TA813050BM

# Stefin B (CSTB) Mouse Monoclonal Antibody (HRP conjugated) [Clone ID: OTI5F2]

## **Product data:**

Product Type:	Primary Antibodies
Clone Name:	OTI5F2
Applications:	IHC, WB
Recommended Dilution:	WB 1:500, IHC 1:500
Reactivity:	Human
Host:	Mouse
lsotype:	lgG1
Clonality:	Monoclonal
Immunogen:	Human recombinant protein fragment corresponding to amino acids 1-98 of human CSTB (NP_000091) produced in E.coli.
Formulation:	PBS (pH 7.3) containing 1% BSA, 50% glycerol.
Concentration:	0.5 mg/ml
Purification:	Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography (protein A/G)
Conjugation:	HRP
Storage:	Store at -20°C as received.
Stability:	Stable for 12 months from date of receipt.
Predicted Protein Size:	11 kDa
Gene Name:	cystatin B
Database Link:	<u>NP_000091</u> <u>Entrez Gene 1476 Human</u> <u>P04080</u>

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2022 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

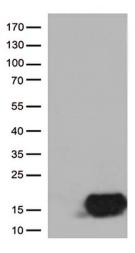

#### Stefin B (CSTB) Mouse Monoclonal Antibody (HRP conjugated) [Clone ID: OTI5F2] – TA813050BM

Background:The cystatin superfamily encompasses proteins that contain multiple cystatin-like sequences.<br/>Some of the members are active cysteine protease inhibitors, while others have lost or<br/>perhaps never acquired this inhibitory activity. There are three inhibitory families in the<br/>superfamily, including the type 1 cystatins (stefins), type 2 cystatins and kininogens. This gene<br/>encodes a stefin that functions as an intracellular thiol protease inhibitor. The protein is able<br/>to form a dimer stabilized by noncovalent forces, inhibiting papain and cathepsins I, h and b.<br/>The protein is thought to play a role in protecting against the proteases leaking from<br/>lysosomes. Evidence indicates that mutations in this gene are responsible for the primary<br/>defects in patients with progressive myoclonic epilepsy (EPM1). One type of mutation<br/>responsible for EPM1 is the expansion in the promoter region of this gene of a<br/>CCCCGCCCGCG repeat from 2-3 copies to 30-78 copies. [provided by RefSeq, Jul 2016]

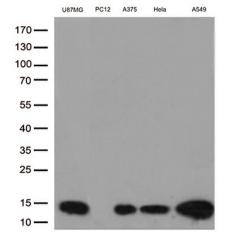

Synonyms:

CPI-B; CST6; EPM1; EPM1A; PME; STFB; ULD

### **Product images:**

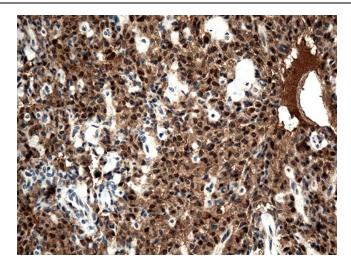

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY CSTB (Cat# [RC203872], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-CSTB (Cat# [TA813050])(1:500). Positive lysates [LY424918] (100ug) and [LC424918] (20ug) can be purchased separately from OriGene.

Western blot analysis of extracts (35ug) from 5 cell lines lysates by using anti-CSTB monoclonal antibody (1:500).
