GRIGENE TNFSF9 Mouse Monoclonal Antibody [Clone ID: OTI15C9] – TA813220

Background:The protein encoded by this gene is a cytokine that belongs to the tumor necrosis factor
(TNF) ligand family. This transmembrane cytokine is a bidirectional signal transducer that acts
as a ligand for TNFRSF9/4-1BB, which is a costimulatory receptor molecule in T lymphocytes.
This cytokine and its receptor are involved in the antigen presentation process and in the
generation of cytotoxic T cells. The receptor TNFRSF9/4-1BB is absent from resting T
lymphocytes but rapidly expressed upon antigenic stimulation. The ligand encoded by this
gene, TNFSF9/4-1BBL, has been shown to reactivate anergic T lymphocytes in addition to
promoting T lymphocyte proliferation. This cytokine has also been shown to be required for
the optimal CD8 responses in CD8 T cells. This cytokine is expressed in carcinoma cell lines,
and is thought to be involved in T cell-tumor cell interaction. [provided by RefSeq, Oct 2008]

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY CD137L (Cat# [RC211160], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-CD137L (Cat# TA813220)(1:1000).
