Background:	This gene is expressed only in the liver and the encoded protein is localized mostly in the peroxisomes, where it is involved in glyoxylate detoxification. Mutations in this gene, some of which alter subcellular targeting, have been associated with type I primary hyperoxaluria. [provided by RefSeq, Jul 2008]

HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY AGXT (Cat# [RC212899], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-AGXT antibody (Cat# TA890098). Positive lysates [LY424964] (100ug) and [LC424964] (20ug) can be purchased separately from OriGene.

Western blot analysis of extracts (35ug) from different cell lines and tissues by using anti-AGXT rabbit polyclonal antibody.
