Background:	Synaptopodin is an actin-associated protein that may play a role in actin-based cell shape and motility. The name synaptopodin derives from the protein's associations with postsynaptic densities and dendritic spines and with renal podocytes (Mundel et al., 1997 [PubMed 9314539]). HEK293T cells were transfected with the pCMV6-ENTRY control (Cat# [PS100001], Left lane) or pCMV6-ENTRY SYNPO (Cat# [RC228616], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-SYNPO antibody (Cat# TA890150). Positive lysates [LY426310] (100ug) and [LC426310] (20ug) can be purchased separately from OriGene.

Western blot analysis of extracts (35ug) from different cell lines and tissues by using anti-SYNPO rabbit polyclonal antibody.
