HLA-DRA Human shRNA Plasmid Kit (Locus ID 3122)

Product data:

Product Type: shRNA Plasmids

Product Name: HLA-DRA Human shRNA Plasmid Kit (Locus ID 3122)

Locus ID: 3122

Synonyms: **HLA-DRA1**

Vector: pGFP-V-RS (TR30007)

E. coli Selection: Kanamycin Mammalian Cell Puromycin

Selection:

Format:

Retroviral plasmids

HLA-DRA - Human, 4 unique 29mer shRNA constructs in retroviral GFP vector(Gene ID = Components:

3122). 5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pGFP-V-RS Vector, TR30013, included for free.

NM 019111, NM 019111.1, NM 019111.2, NM 019111.3, NM 019111.4, BC071659, RefSeq:

BC071659.1, BC032350, BM849755

UniProt ID: P01903

Summary: HLA-DRA is one of the HLA class II alpha chain paralogues. This class II molecule is a

heterodimer consisting of an alpha and a beta chain, both anchored in the membrane. This

molecule is expressed on the surface of various antigen presenting cells such as B

lymphocytes, dendritic cells, and monocytes/macrophages, and plays a central role in the immune system and response by presenting peptides derived from extracellular proteins, in particular, pathogen-derived peptides to T cells. The alpha chain is approximately 33-35 kDa and its gene contains 5 exons. Exon 1 encodes the leader peptide, exons 2 and 3 encode the

cytoplasmic tail. DRA does not have polymorphisms in the peptide binding part and acts as

the sole alpha chain for DRB1, DRB3, DRB4 and DRB5. [provided by RefSeq, Aug 2020]

two extracellular domains, and exon 4 encodes the transmembrane domain and the

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

> be certain that your variant of interest is targeted, please contact techsupport@origene.com. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
