

Product datasheet for TG312793

GFI1 Human shRNA Plasmid Kit (Locus ID 2672)

Product data:

Product Type: shRNA Plasmids

Product Name: GFI1 Human shRNA Plasmid Kit (Locus ID 2672)

Locus ID: 2672

Synonyms: GFI-1; GFI1A; SCN2; ZNF163

Vector: pGFP-V-RS (TR30007)

E. coli Selection: Kanamycin

Mammalian Cell Puromycin

Selection:

Format: Retroviral plasmids

Components: GFI1 - Human, 4 unique 29mer shRNA constructs in retroviral GFP vector(Gene ID = 2672).

5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pGFP-V-RS Vector, TR30013, included for free.

RefSeq: NM 001127215, NM 001127216, NM 005263, NM 005263.1, NM 005263.2, NM 005263.3,

NM 001127215.1, NM 001127216.1, BC032751, BC032751.1, BC074866, BC074867,

BM150826, NM 001127216.2, NM 001127215.2, NM 005263.5

UniProt ID: Q99684

Summary: This gene encodes a nuclear zinc finger protein that functions as a transcriptional repressor.

This protein plays a role in diverse developmental contexts, including hematopoiesis and oncogenesis. It functions as part of a complex along with other cofactors to control histone modifications that lead to silencing of the target gene promoters. Mutations in this gene cause autosomal dominant severe congenital neutropenia, and also dominant nonimmune chronic idiopathic neutropenia of adults, which are heterogeneous hematopoietic disorders that cause predispositions to leukemias and infections. Multiple alternatively spliced variants, encoding the same protein, have been identified for this gene. [provided by RefSeq, Jul 2008]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
