

Product datasheet for TG503372

1 Todact datasticct for Taboss72

Crbn Mouse shRNA Plasmid (Locus ID 58799)

Product data:

Product Type: shRNA Plasmids

Product Name: Crbn Mouse shRNA Plasmid (Locus ID 58799)

Locus ID: 58799

Synonyms: 2610203G15Rik; 2900045O07Rik; AF229032; AW108261; piL

Vector: pGFP-V-RS (TR30007)

E. coli Selection: Kanamycin

Mammalian Cell Puromycin

Selection:

Format: Retroviral plasmids

Components: Crbn - Mouse, 4 unique 29mer shRNA constructs in retroviral GFP vector(Gene ID = 58799).

5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pGFP-V-RS Vector, TR30013, included for free.

RefSeq: BC086488, NM 021449, NM 175357, NM 175357.1, NM 175357.2, NM 175357.3,

NM 021449.1, NM 021449.2, NM 021449.3, BC033458, BC046967, BC069905

UniProt ID: Q8C7D2

Summary: This gene encodes a protein with a Lon protease domain, a "regulators of G protein-

signaling" (RGS)-like domain and a leucine zipper. It has been proposed to regulate the

assembly and surface expression of large-conductance calcium-activated potassium channels

in brain and to bind thalidomide. In humans mutation in this gene causes autosomal recessive nonsyndromic cognitive disability. In mouse deficiency of this gene serves as a model to study the molecular mechanisms governing learning and memory as they relate to intellectual disability. Alternative splicing results in multiple transcript variants that encode

different protein isoforms. [provided by RefSeq, Jan 2013]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

OriGene Technologies, Inc. 9620 Medical Center Drive, Ste 200

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
