# Product datasheet for TL300398V

## 14-3-3 beta (YWHAB) Human shRNA Lentiviral Particle (Locus ID 7529)

### **Product data:**

Product Type:	shRNA Lentiviral Particles
Product Name:	14-3-3 beta (YWHAB) Human shRNA Lentiviral Particle (Locus ID 7529)
Locus ID:	7529
Synonyms:	GW128; HEL-S-1; HS1; KCIP-1; YWHAA
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	YWHAB - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10^7 TU/ml.
RefSeq:	<u>NM 003404, NM 139323, NM 139323.1, NM 139323.2, NM 139323.3, NM 003404.1, NM 003404.2, NM 003404.3, NM 003404.4, BC001359, BC001359.2, BC010352, NM 139323.4, NM 003404.5</u>
UniProt ID:	<u>P31946</u>
Summary:	This gene encodes a protein belonging to the 14-3-3 family of proteins, members of which mediate signal transduction by binding to phosphoserine-containing proteins. This highly conserved protein family is found in both plants and mammals. The encoded protein has been shown to interact with RAF1 and CDC25 phosphatases, suggesting that it may play a role in linking mitogenic signaling and the cell cycle machinery. Two transcript variants, which encode the same protein, have been identified for this gene. [provided by RefSeq, Jul 2008]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u> . If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u> .

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2022 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

#### CRIGENE 14-3-3 beta (YWHAB) Human shRNA Lentiviral Particle (Locus ID 7529) – TL300398V

Performance Guaranteed: OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
