

## Product datasheet for **TL301521V**

### SLFN11 Human shRNA Lentiviral Particle (Locus ID 91607)

#### Product data:

Product Type:	shRNA Lentiviral Particles
Product Name:	SLFN11 Human shRNA Lentiviral Particle (Locus ID 91607)
Locus ID:	91607
Synonyms:	SLFN8/9
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	SLFN11 - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10 <sup>7</sup> TU/ml.
RefSeq:	<a href="#">NM_001104587</a> , <a href="#">NM_001104588</a> , <a href="#">NM_001104589</a> , <a href="#">NM_001104590</a> , <a href="#">NM_152270</a> , <a href="#">NM_152270.1</a> , <a href="#">NM_152270.2</a> , <a href="#">NM_152270.3</a> , <a href="#">NM_001104587.1</a> , <a href="#">NM_001104588.1</a> , <a href="#">NM_001104589.1</a> , <a href="#">NM_001104590.1</a> , <a href="#">BC052586</a> , <a href="#">BC052586.1</a> , <a href="#">BC141660</a> , <a href="#">BM996330</a> , <a href="#">NM_001104587.2</a> , <a href="#">NM_152270.4</a> , <a href="#">NM_001104589.2</a> , <a href="#">NM_001104588.2</a> , <a href="#">NM_001104590.2</a>
UniProt ID:	<a href="#">Q7Z7L1</a>
Summary:	<p>Inhibitor of DNA replication that promotes cell death in response to DNA damage (PubMed:22927417, PubMed:26658330, PubMed:29395061). Acts as a guardian of the genome by killing cells with defective replication (PubMed:29395061). Persistently blocks stressed replication forks by opening chromatin across replication initiation sites at stressed replication forks, possibly leading to unwind DNA ahead of the MCM helicase and block fork progression, ultimately leading to cell death (PubMed:29395061). Acts independently of ATR (PubMed:29395061). Also acts as an interferon (IFN)-induced antiviral protein which acts as an inhibitor of retrovirus protein synthesis (PubMed:23000900). Specifically abrogates the production of retroviruses such as human immunodeficiency virus 1 (HIV-1) by acting as a specific inhibitor of the synthesis of retroviruses encoded proteins in a codon-usage-dependent manner (PubMed:23000900). Binds to tRNAs and exploits the unique viral codon bias towards A/T nucleotides (PubMed:23000900). The exact inhibition mechanism is unclear: may either sequester tRNAs, prevent their maturation via post-transcriptional processing or may accelerate their deacylation (PubMed:23000900). Does not inhibit reverse transcription, integration or production and nuclear export of viral RNA (PubMed:23000900).</p> <p>[UniProtKB/Swiss-Prot Function]</p>

**shRNA Design:** These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact [techsupport@origene.com](mailto:techsupport@origene.com). If you need a special design or shRNA sequence, please utilize our [custom shRNA service](#).

**Performance Guaranteed:** OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at [techsupport@origene.com](mailto:techsupport@origene.com). Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).

### Product images:

GFP signal was observed under microscope at 48 hours after transduction of TL301521B virus into HEK293 cells. TL301521B virus was prepared using lenti-shRNA TL301521B and [TR30037] packaging kit.
