Syntenin 2 (SDCBP2) Human shRNA Plasmid Kit (Locus ID 27111)

Product data:

Product Type: shRNA Plasmids

Product Name: Syntenin 2 (SDCBP2) Human shRNA Plasmid Kit (Locus ID 27111)

Locus ID: 27111

Synonyms: SITAC; SITAC18; ST-2; ST2

Vector: pGFP-C-shLenti (TR30023)

E. coli Selection: Chloramphenicol (34 ug/ml)

Mammalian Cell

III Cell

Puromycin

Selection: Format:

Lentiviral plasmids

Components: SDCBP2 - Human, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID = 27111).

5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free.

RefSeq: NM 001199784, NM 015685, NM 080489, NM 080489.1, NM 080489.2, NM 080489.3,

NM 080489.4, NM 015685.1, NM 015685.2, NM 015685.3, NM 015685.4, NM 015685.5,

NM 001199784.1, BC002727, BM987490, NM 080489.5

UniProt ID: Q9H190

Summary: The protein encoded by this gene contains two class II PDZ domains. PDZ domains facilitate

protein-protein interactions by binding to the cytoplasmic C-terminus of transmembrane proteins, and PDZ-containing proteins mediate cell signaling and the organization of protein complexes. The encoded protein binds to phosphatidylinositol 4, 5-bisphosphate (PIP2) and plays a role in nuclear PIP2 organization and cell division. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene. Read-through transcription also exists between this gene and the upstream FKBP1A (FK506 binding protein

1A, 12kDa) gene, as represented in GeneID:100528031. [provided by RefSeq, Sep 2011]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
