

Product datasheet for **TL302028V**

RFC5 Human shRNA Lentiviral Particle (Locus ID 5985)

Product data:

Product Type:	shRNA Lentiviral Particles
Product Name:	RFC5 Human shRNA Lentiviral Particle (Locus ID 5985)
Locus ID:	5985
Synonyms:	RFC36
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	RFC5 - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10 ⁷ TU/ml.
RefSeq:	NM_001130112 , NM_001130113 , NM_001206801 , NM_007370 , NM_181578 , NM_001346815 , NR_144504 , NM_181578.1 , NM_181578.2 , NM_181578.3 , NM_181578.4 , NM_007370.1 , NM_007370.2 , NM_007370.3 , NM_007370.4 , NM_007370.5 , NM_007370.6 , NM_001130112.1 , NM_001130112.2 , NM_001130112.3 , NM_001206801.1 , NM_001206801.2 , BC001866 , BC001866.1 , BC013961 , BC020440 , BM153733 , NM_007370.7
UniProt ID:	P40937
Summary:	This gene encodes the smallest subunit of the replication factor C complex, which consists of five distinct subunits (140, 40, 38, 37, and 36 kDa) and is required for DNA replication. This subunit interacts with the C-terminal region of proliferating cell nuclear antigen and is required to open and load proliferating cell nuclear antigen onto DNA during S phase. It is a member of the AAA+ (ATPases associated with various cellular activities) ATPase family and forms a core complex with the 38 and 40 kDa subunits that possesses DNA-dependent ATPase activity. A related pseudogene has been identified on chromosome 9. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Nov 2016]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact techsupport@origene.com . If you need a special design or shRNA sequence, please utilize our custom shRNA service .

**Performance
Guaranteed:**

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
