# Product datasheet for TL302038V

## NF-kB p65 (RELA) Human shRNA Lentiviral Particle (Locus ID 5970)

### **Product data:**

| Product Type: | shRNA Lentiviral Particles   |
|---------------|--|
| Product Name: | NF-kB p65 (RELA) Human shRNA Lentiviral Particle (Locus ID 5970)   |
| Locus ID:     | 5970   |
| Synonyms:     | CMCU; NFKB3; p65   |
| Vector:       | pGFP-C-shLenti (TR30023)   |
| Format:       | Lentiviral particles   |
| Components:   | RELA - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10^7 TU/ml.  |
| RefSeq:       | <u>NM 001145138, NM 001243984, NM 001243985, NM 021975, NM 021975.1, NM 021975.2, NM 021975.3, NM 001145138.1, NM 001243984.1, NM 001243985.1, BC033522, BC011603, BC014095, BC069248, BC110830, BM916512, NM 001243984.2, NM 021975.4, NM 001145138.2</u>   |
| UniProt ID:   | <u>Q04206</u>  |
| Summary:      | NF-kappa-B is a ubiquitous transcription factor involved in several biological processes. It is<br>held in the cytoplasm in an inactive state by specific inhibitors. Upon degradation of the<br>inhibitor, NF-kappa-B moves to the nucleus and activates transcription of specific genes. NF-<br>kappa-B is composed of NFKB1 or NFKB2 bound to either REL, RELA, or RELB. The most<br>abundant form of NF-kappa-B is NFKB1 complexed with the product of this gene, RELA. Four<br>transcript variants encoding different isoforms have been found for this gene. [provided by<br>RefSeq, Sep 2011] |
| shRNA Design: | These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u> .<br>If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u> .   |

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

#### STANDARIGENE NF-kB p65 (RELA) Human shRNA Lentiviral Particle (Locus ID 5970) – TL302038V

Performance Guaranteed: OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).

#### **Product images:**

GFP signal was observed under microscope at 48 hours after transduction of TL302038B virus into HEK293 cells. TL302038B virus was prepared using lenti-shRNA TL302038B and [TR30037] packaging kit.
