## CtIP (RBBP8) Human shRNA Plasmid Kit (Locus ID 5932)

**Product data:** 

**Product Type:** shRNA Plasmids

**Product Name:** CtIP (RBBP8) Human shRNA Plasmid Kit (Locus ID 5932)

**Locus ID:** 5932

**Synonyms:** COM1; CTIP; JWDS; RIM; SAE2; SCKL2

Puromycin

**Vector:** pGFP-C-shLenti (TR30023)

**E. coli Selection:** Chloramphenicol (34 ug/ml)

Selection:

Mammalian Cell

Format: Lentiviral plasmids

Components: RBBP8 - Human, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID = 5932).

5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free.

RefSeq: NM 002894, NM 203291, NM 203292, NM 203292.1, NM 203291.1, NM 002894.2, BC001170,

BC030590, NM 002894.3

UniProt ID: 099708

**Summary:** The protein encoded by this gene is a ubiquitously expressed nuclear protein. It is found

among several proteins that bind directly to retinoblastoma protein, which regulates cell proliferation. This protein complexes with transcriptional co-repressor CTBP. It is also associated with BRCA1 and is thought to modulate the functions of BRCA1 in transcriptional regulation, DNA repair, and/or cell cycle checkpoint control. It is suggested that this gene may itself be a tumor suppressor acting in the same pathway as BRCA1. Three transcript variants encoding two different isoforms have been found for this gene. More transcript variants exist, but their full-length natures have not been determined. [provided by RefSeq, Jul 2008]

**shRNA Design:** These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

## Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
