PPP2R3A Human shRNA Lentiviral Particle (Locus ID 5523)

Product data:

Product Type: shRNA Lentiviral Particles

Product Name: PPP2R3A Human shRNA Lentiviral Particle (Locus ID 5523)

Locus ID: 5523

Synonyms: PPP2R3; PR72; PR130

Vector: pGFP-C-shLenti (TR30023)

Format: Lentiviral particles

Components: PPP2R3A - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1

scramble control), 0.5 ml each, >10^7 TU/ml.

RefSeq: NM 001190447, NM 002718, NM 181897, NM 002718.1, NM 002718.2, NM 002718.3,

NM 002718.4, NM 181897.1, NM 181897.2, NM 001190447.1, BC065531, BC065531.1,

BC015034, BC029409, BC040158, NM 181897.3, NM 001190447.2, NM 002718.5

UniProt ID: Q06190

Summary: This gene encodes one of the regulatory subunits of the protein phosphatase 2. Protein

phosphatase 2 (formerly named type 2A) is one of the four major Ser/Thr phosphatases and is implicated in the negative control of cell growth and division. Protein phosphatase 2 holoenzymes are heterotrimeric proteins composed of a structural subunit A, a catalytic subunit C, and a regulatory subunit B. The regulatory subunit is encoded by a diverse set of

genes that have been grouped into the B/PR55, B'/PR61, and B''/PR72 families. These different regulatory subunits confer distinct enzymatic specificities and intracellular localizations to the holozenzyme. The product of this gene belongs to the B'' family. The B''

family has been further divided into subfamilies. The product of this gene belongs to the alpha subfamily of regulatory subunit B". Alternative splicing results in multiple transcript

variants encoding different isoforms.[provided by RefSeq, Jun 2010]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>.

If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
