

Product datasheet for **TL302406V**

Plexin A1 (PLXNA1) Human shRNA Lentiviral Particle (Locus ID 5361)

Product data:

Product Type:	shRNA Lentiviral Particles
Product Name:	Plexin A1 (PLXNA1) Human shRNA Lentiviral Particle (Locus ID 5361)
Locus ID:	5361
Synonyms:	NOV; NOVP; PLEXIN-A1; PLXN1
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	PLXNA1 - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10 ⁷ TU/ml.
RefSeq:	NM_032242 , NM_032242.2 , NM_032242.3 , BC017323 , BC032432 , BC042904 , BC156129 , BC157020
UniProt ID:	Q9UIW2
Summary:	Coreceptor for SEMA3A, SEMA3C, SEMA3F and SEMA6D. Necessary for signaling by class 3 semaphorins and subsequent remodeling of the cytoskeleton. Plays a role in axon guidance, invasive growth and cell migration. Class 3 semaphorins bind to a complex composed of a neuropilin and a plexin. The plexin modulates the affinity of the complex for specific semaphorins, and its cytoplasmic domain is required for the activation of down-stream signaling events in the cytoplasm (By similarity).[UniProtKB/Swiss-Prot Function]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact techsupport@origene.com . If you need a special design or shRNA sequence, please utilize our custom shRNA service .

**Performance
Guaranteed:**

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).

Product images:

GFP signal was observed under microscope at 48 hours after transduction of TL302406A virus into HEK293 cells. TL302406A virus was prepared using lenti-shRNA TL302406A and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of TL302406B virus into HEK293 cells. TL302406B virus was prepared using lenti-shRNA TL302406B and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL302406C] virus into HEK293 cells. [TL302406C] virus was prepared using lenti-shRNA [TL302406C] and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL302406D] virus into HEK293 cells. [TL302406D] virus was prepared using lenti-shRNA [TL302406D] and [TR30037] packaging kit.
