

## Product datasheet for **TL303306V**

### MCOLN2 Human shRNA Lentiviral Particle (Locus ID 255231)

#### Product data:

Product Type:	shRNA Lentiviral Particles
Product Name:	MCOLN2 Human shRNA Lentiviral Particle (Locus ID 255231)
Locus ID:	255231
Synonyms:	TRP-ML2; TRPML2
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	MCOLN2 - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10 <sup>7</sup> TU/ml.
RefSeq:	<a href="#">NM_153259</a> , <a href="#">NM_001330647</a> , <a href="#">NM_153259.1</a> , <a href="#">NM_153259.2</a> , <a href="#">NM_153259.3</a> , <a href="#">BC104891</a> , <a href="#">BC104891.1</a> , <a href="#">BC104893</a> , <a href="#">NM_153259.4</a>
UniProt ID:	<a href="#">Q8IZK6</a>
Summary:	Mucolipins constitute a family of cation channel proteins with homology to the transient receptor potential superfamily. In mammals, the mucolipin family includes 3 members, MCOLN1 (MIM 605248), MCOLN2, and MCOLN3 (MIM 607400), that exhibit a common 6-membrane-spanning topology. Homologs of mammalian mucolipins exist in <i>Drosophila</i> and <i>C. elegans</i> . Mutations in the human MCOLN1 gene cause mucopolipodosis IV (MIM 262650) (Karacsonyi et al., 2007 [PubMed 17662026]).[Supplied by OMIM, Sep 2009]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact <a href="mailto:techsupport@origene.com">techsupport@origene.com</a> . If you need a special design or shRNA sequence, please utilize our <a href="#">custom shRNA service</a> .

**Performance  
Guaranteed:**

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at [techsupport@origene.com](mailto:techsupport@origene.com). Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
