

## Product datasheet for **TL303593**

### L3MBTL3 Human shRNA Plasmid Kit (Locus ID 84456)

#### Product data:

Product Type:	shRNA Plasmids
Product Name:	L3MBTL3 Human shRNA Plasmid Kit (Locus ID 84456)
Locus ID:	84456
Synonyms:	MBT-1; MBT1
Vector:	pGFP-C-shLenti (TR30023)
E. coli Selection:	Chloramphenicol (34 ug/ml)
Mammalian Cell Selection:	Puromycin
Format:	Lentiviral plasmids
Components:	L3MBTL3 - Human, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID = 84456). 5µg purified plasmid DNA per construct 29-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free.
RefSeq:	<a href="#">NM_001007102</a> , <a href="#">NM_032438</a> , <a href="#">NM_001346550</a> , <a href="#">NM_001346551</a> , <a href="#">NM_001007102.1</a> , <a href="#">NM_001007102.2</a> , <a href="#">NM_001007102.3</a> , <a href="#">NM_032438.1</a> , <a href="#">NM_032438.2</a> , <a href="#">NM_032438.3</a> , <a href="#">BC060845</a> , <a href="#">BC060845.1</a> , <a href="#">NM_032438.4</a> , <a href="#">NM_001007102.4</a>
UniProt ID:	<a href="#">Q96JM7</a>
Summary:	This gene encodes a member of the malignant brain tumor (MBT) family of chromatin interacting transcriptional repressors. Members of this family function as methyl-lysine readers, which recognize methylated lysine residues on histone protein tails, and are associated with the repression of gene expression. The encoded protein may regulate hematopoiesis. Homozygous deletion of this gene has been observed in human patients with medulloblastoma. [provided by RefSeq, Oct 2016]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact <a href="mailto:techsupport@origene.com">techsupport@origene.com</a> . If you need a special design or shRNA sequence, please utilize our <a href="#">custom shRNA service</a> .

**Performance  
Guaranteed:**

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at [techsupport@origene.com](mailto:techsupport@origene.com). Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
