

Product datasheet for **TL303892V**

IQCK Human shRNA Lentiviral Particle (Locus ID 124152)

Product data:

Product Type:	shRNA Lentiviral Particles
Product Name:	IQCK Human shRNA Lentiviral Particle (Locus ID 124152)
Locus ID:	124152
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	IQCK - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10 ⁷ TU/ml.
RefSeq:	BC034823 , NM_001305121 , NM_001305122 , NM_153208 , NR_130967 , NR_130968 , NM_153208.1 , NM_153208.2 , BC034823.1 , BC010515
UniProt ID:	Q8N0W5
Summary:	This gene belongs to the IQ motif-containing family of proteins. The IQ motif serves as a binding site for different EF-hand proteins such as calmodulin. This gene was identified as a potential candidate gene for obsessive-compulsive disorder in a genome-wide association study. Alternative splicing of this gene results in multiple transcript variants. [provided by RefSeq, Feb 2015]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact techsupport@origene.com . If you need a special design or shRNA sequence, please utilize our custom shRNA service .

**Performance
Guaranteed:**

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

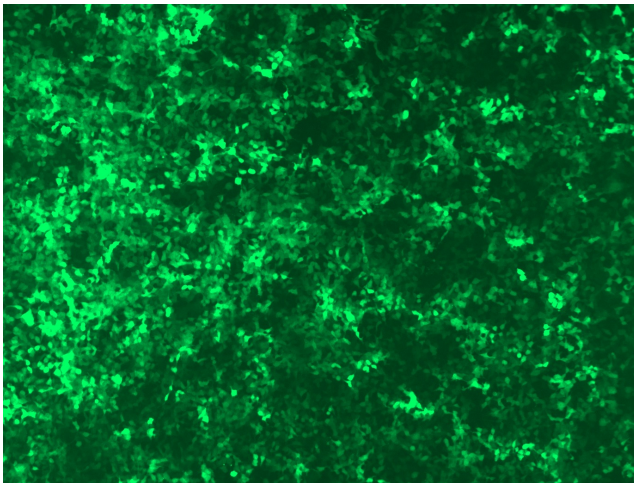

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).

Product images:

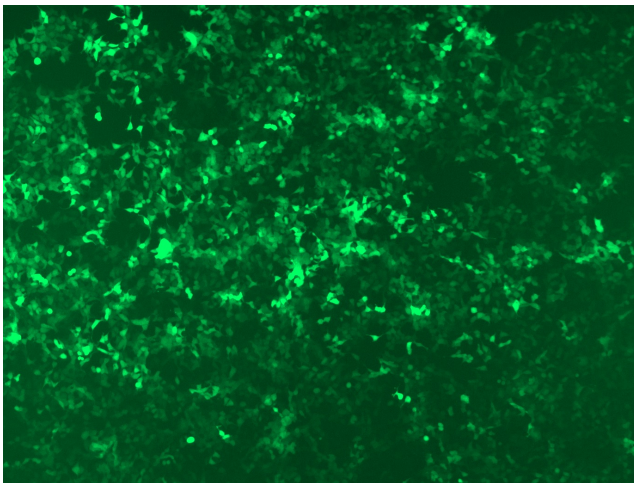

GFP signal was observed under microscope at 48 hours after transduction of TL303892A virus into HEK293 cells. TL303892A virus was prepared using lenti-shRNA TL303892A and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of TL303892B virus into HEK293 cells. TL303892B virus was prepared using lenti-shRNA TL303892B and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL303892C] virus into HEK293 cells. [TL303892C] virus was prepared using lenti-shRNA [TL303892C] and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL303892D] virus into HEK293 cells. [TL303892D] virus was prepared using lenti-shRNA [TL303892D] and [TR30037] packaging kit.
