

Product datasheet for **TL304019V**

5HT3A receptor (HTR3A) Human shRNA Lentiviral Particle (Locus ID 3359)

Product data:

Product Type:	shRNA Lentiviral Particles
Product Name:	5HT3A receptor (HTR3A) Human shRNA Lentiviral Particle (Locus ID 3359)
Locus ID:	3359
Synonyms:	5-HT-3; 5-HT3A; 5-HT3R; 5HT3R; HTR3
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	HTR3A - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10 ⁷ TU/ml.
RefSeq:	NM_000869 , NM_001161772 , NM_213621 , NR_046363 , NM_000869.1 , NM_000869.2 , NM_000869.3 , NM_000869.4 , NM_000869.5 , NM_213621.1 , NM_213621.2 , NM_213621.3 , NM_001161772.1 , NM_001161772.2 , BC004453 , BC004453.1 , BC002354 , NM_213621.4 , NM_001161772.3 , NM_000869.6
UniProt ID:	P46098
Summary:	The product of this gene belongs to the ligand-gated ion channel receptor superfamily. This gene encodes subunit A of the type 3 receptor for 5-hydroxytryptamine (serotonin), a biogenic hormone that functions as a neurotransmitter, a hormone, and a mitogen. This receptor causes fast, depolarizing responses in neurons after activation. It appears that the heteromeric combination of A and B subunits is necessary to provide the full functional features of this receptor, since either subunit alone results in receptors with very low conductance and response amplitude. Alternatively spliced transcript variants encoding different isoforms have been identified. [provided by RefSeq, Jul 2008]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact techsupport@origene.com . If you need a special design or shRNA sequence, please utilize our custom shRNA service .

**Performance
Guaranteed:**

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
