HDAC7 Human shRNA Lentiviral Particle (Locus ID 51564)

Product data:

Product Type: shRNA Lentiviral Particles

Product Name: HDAC7 Human shRNA Lentiviral Particle (Locus ID 51564)

Locus ID: 51564

Synonyms: HD7; HD7A; HDAC7A

Vector: pGFP-C-shLenti (TR30023)

Format: Lentiviral particles

Components: HDAC7A - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1

scramble control), 0.5 ml each, >10^7 TU/ml.

RefSeq: NM 001098415, NM 001098416, NM 001308090, NM 015401, NM 016596, NM 016596.1,

NM 016596.2, NM 016596.3, NM 015401.1, NM 015401.2, NM 015401.3, NM 015401.4, NM 001098416.1, NM 001098416.2, NM 001098416.3, NM 001098415.1, BC006453, BC020505, BC064840, BM144303, NR 160435, NR 160436, NM 001368046, NM 015401.5,

NM 001098416.4

UniProt ID: Q8WUI4

Summary: Histones play a critical role in transcriptional regulation, cell cycle progression, and

developmental events. Histone acetylation/deacetylation alters chromosome structure and affects transcription factor access to DNA. The protein encoded by this gene has sequence homology to members of the histone deacetylase family. This gene is orthologous to mouse

HDAC7 gene whose protein promotes repression mediated via the transcriptional

corepressor SMRT. Alternatively spliced transcript variants encoding different isoforms have

been found for this gene. [provided by RefSeq, Jul 2008]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
