

Product datasheet for TL304388

OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

GBA3 Human shRNA Plasmid Kit (Locus ID 57733)

Product data:

Product Type: shRNA Plasmids

Product Name: GBA3 Human shRNA Plasmid Kit (Locus ID 57733)

Locus ID: 57733

Synonyms: CBG; CBGL1; GLUC; KLRP

Vector: pGFP-C-shLenti (TR30023)

E. coli Selection: Chloramphenicol (34 ug/ml)

Mammalian Cell

aiiiiiaiiaii Ceii — Fu

Selection:

Puromycin

Format: Lentiviral plasmids

Components: GBA3 - Human, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID = 57733).

5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free.

RefSeq: NM 001128432, NM 001277225, NM 020973, NR 102355, NR 102356, NR 102357,

NM 020973.1, NM 020973.2, NM 020973.3, NM 020973.4, NM 001128432.1,

NM 001128432.2, NM 001277225.1, BC101829, BC101829.1, BC029362, BC070188, BC109377,

BC136264

UniProt ID: Q9H227

Summary: The protein encoded by this gene is an enzyme that can hydrolyze several types of

glycosides. This gene is a polymorphic pseudogene, with the most common allele being the functional allele that encodes the full-length protein. Some individuals, as represented by the

reference genome allele, contain a single nucleotide polymorphism that results in a

premature stop codon in the coding region, and therefore this allele is pseudogenic due to the failure to produce a functional full-length protein. Alternative splicing of this gene results

in multiple transcript variants. [provided by RefSeq, Mar 2013]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
