

Product datasheet for **TL304435V**

Frizzled 8 (FZD8) Human shRNA Lentiviral Particle (Locus ID 8325)

Product data:

Product Type:	shRNA Lentiviral Particles
Product Name:	Frizzled 8 (FZD8) Human shRNA Lentiviral Particle (Locus ID 8325)
Locus ID:	8325
Synonyms:	FZ-8; hFZ8
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	FZD8 - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10 ⁷ TU/ml.
RefSeq:	NM_031866 , NM_031866.1 , NM_031866.2 , BC111845
UniProt ID:	Q9H461
Summary:	This intronless gene is a member of the frizzled gene family. Members of this family encode seven-transmembrane domain proteins that are receptors for the Wingless type MMTV integration site family of signaling proteins. Most frizzled receptors are coupled to the beta-catenin canonical signaling pathway. This gene is highly expressed in two human cancer cell lines, indicating that it may play a role in several types of cancer. The crystal structure of the extracellular cysteine-rich domain of a similar mouse protein has been determined. [provided by RefSeq, Jul 2008]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact techsupport@origene.com . If you need a special design or shRNA sequence, please utilize our custom shRNA service .

**Performance
Guaranteed:**

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).

Product images:

GFP signal was observed under microscope at 48 hours after transduction of TL304435A virus into HEK293 cells. TL304435A virus was prepared using lenti-shRNA TL304435A and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of TL304435B virus into HEK293 cells. TL304435B virus was prepared using lenti-shRNA TL304435B and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL304435C] virus into HEK293 cells. [TL304435C] virus was prepared using lenti-shRNA [TL304435C] and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL304435D] virus into HEK293 cells. [TL304435D] virus was prepared using lenti-shRNA [TL304435D] and [TR30037] packaging kit.
