

Product datasheet for TL304478V

FOXA2 Human shRNA Lentiviral Particle (Locus ID 3170)

Product data:

Product Type:	shRNA Lentiviral Particles
Product Name:	FOXA2 Human shRNA Lentiviral Particle (Locus ID 3170)
Locus ID:	3170
Synonyms:	HNF-3-beta; HNF3B; TCF3B
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	FOXA2 - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10^7 TU/ml.
RefSeq:	<u>NM 021784, NM 153675, NM 021784.1, NM 021784.2, NM 021784.3, NM 021784.4,</u> <u>NM 153675.1, NM 153675.2, BC011780, BC011780.2, BC006545, BC019288, BM273279,</u> <u>NM 153675.3</u>
UniProt ID:	<u>Q9Y261</u>
Summary:	This gene encodes a member of the forkhead class of DNA-binding proteins. These hepatocyte nuclear factors are transcriptional activators for liver-specific genes such as albumin and transthyretin, and they also interact with chromatin. Similar family members in mice have roles in the regulation of metabolism and in the differentiation of the pancreas and liver. This gene has been linked to sporadic cases of maturity-onset diabetes of the young. Transcript variants encoding different isoforms have been identified for this gene. [provided by RefSeq, Oct 2008]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u> . If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u> .

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2022 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

SORIGENE FOXA2 Human shRNA Lentiviral Particle (Locus ID 3170) – TL304478V

Performance Guaranteed: OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
