DNASE2B Human shRNA Lentiviral Particle (Locus ID 58511)

Product data:

Product Type: shRNA Lentiviral Particles

Product Name: DNASE2B Human shRNA Lentiviral Particle (Locus ID 58511)

Locus ID: 58511
Synonyms: DLAD

Vector: pGFP-C-shLenti (TR30023)

Format: Lentiviral particles

Components: DNASE2B - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1

scramble control), 0.5 ml each, >10^7 TU/ml.

RefSeq: NM 021233, NM 058248, NM 021233.1, NM 021233.2, NM 058248.1, BC126136, BC065182,

BC080621, BC126138

UniProt ID: Q8WZ79

Summary: The protein encoded by this gene shares considerable sequence similarity to, and is

structurally related to DNase II. The latter is a well characterized endonuclease that catalyzes DNA hydrolysis in the absence of divalent cations at acidic pH. Unlike DNase II which is

ubiquitously expressed, expression of this gene product is restricted to the salivary gland and

lungs. The gene has been localized to chromosome 1p22.3 adjacent (and in opposite

orientation) to the uricase pseudogene. Two transcript variants encoding different isoforms

have been described for this gene. [provided by RefSeq, Jul 2008]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
