

Product datasheet for **TL305207V**

TORC2 (CRTC2) Human shRNA Lentiviral Particle (Locus ID 200186)

Product data:

Product Type:	shRNA Lentiviral Particles
Product Name:	TORC2 (CRTC2) Human shRNA Lentiviral Particle (Locus ID 200186)
Locus ID:	200186
Synonyms:	TORC-2; TORC2
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	CRTC2 - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10 ⁷ TU/ml.
RefSeq:	NM_181715 , NM_181715.1 , NM_181715.2 , BC053562 , BC053562.1 , BC028886 , BC033304 , BM987537
UniProt ID:	Q53ET0
Summary:	This gene encodes a member of the transducers of regulated cAMP response element-binding protein activity family of transcription coactivators. These proteins promote the transcription of genes targeted by the cAMP response element-binding protein, and therefore play an important role in many cellular processes. Under basal conditions the encoded protein is phosphorylated by AMP-activated protein kinase or the salt-inducible kinases and is sequestered in the cytoplasm. Upon activation by elevated cAMP or calcium, the encoded protein translocates to the nucleus and increases target gene expression. Single nucleotide polymorphisms in this gene may increase the risk of type 2 diabetes. A pseudogene of this gene is located on the long arm of chromosome 5. [provided by RefSeq, Dec 2010]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact techsupport@origene.com . If you need a special design or shRNA sequence, please utilize our custom shRNA service .

**Performance
Guaranteed:**

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).

Product images:

GFP signal was observed under microscope at 48 hours after transduction of TL305207A virus into HEK293 cells. TL305207A virus was prepared using lenti-shRNA TL305207A and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of TL305207B virus into HEK293 cells. TL305207B virus was prepared using lenti-shRNA TL305207B and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL305207C] virus into HEK293 cells. [TL305207C] virus was prepared using lenti-shRNA [TL305207C] and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL305207D] virus into HEK293 cells. [TL305207D] virus was prepared using lenti-shRNA [TL305207D] and [TR30037] packaging kit.
