Caveolin 2 (CAV2) Human shRNA Plasmid Kit (Locus ID 858)

Product data:

Product Type: shRNA Plasmids

Product Name: Caveolin 2 (CAV2) Human shRNA Plasmid Kit (Locus ID 858)

Locus ID: 858 Synonyms: CAV

Vector:pGFP-C-shLenti (TR30023)E. coli Selection:Chloramphenicol (34 ug/ml)

Mammalian Cell

Selection:

Puromycin

Format: Lentiviral plasmids

CAV2 - Human, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID = 858). 5µg

purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free.

RefSeq: NM 001206747, NM 001206748, NM 001233, NM 198212, NM 001233.1, NM 001233.2,

NM 001233.3, NM 001233.4, NM 198212.1, NM 198212.2, NM 001206748.1,

NM 001206747.1, BC005256, BC005256.1, BM542127, BM762545, NM 001206747.2,

NM 001206748.2, NM 001233.5, NM 198212.3

UniProt ID: P51636

Summary: The protein encoded by this gene is a major component of the inner surface of caveolae,

small invaginations of the plasma membrane, and is involved in essential cellular functions, including signal transduction, lipid metabolism, cellular growth control and apoptosis. This protein may function as a tumor suppressor. This gene and related family member (CAV1) are located next to each other on chromosome 7, and express colocalizing proteins that form a stable hetero-oligomeric complex. Alternatively spliced transcript variants encoding different isoforms have been identified for this gene. Additional isoforms resulting from the use of alternate in-frame translation initiation codons have also been described, and shown to have

preferential localization in the cell (PMID:11238462). [provided by RefSeq, May 2011]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
