

# Product datasheet for TL306394

# Livin (BIRC7) Human shRNA Plasmid Kit (Locus ID 79444)

## **Product data:**

#### **Product Type:** shRNA Plasmids **Product Name:** Livin (BIRC7) Human shRNA Plasmid Kit (Locus ID 79444) Locus ID: 79444 KIAP; LIVIN; ML-IAP; MLIAP; RNF50 Synonyms: Vector: pGFP-C-shLenti (TR30023) E. coli Selection: Chloramphenicol (34 ug/ml) Mammalian Cell Puromycin Selection: Format: Lentiviral plasmids **Components:** BIRC7 - Human, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID = 79444). 5µg purified plasmid DNA per construct 29-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free. NM 022161, NM 139317, NM 139317.1, NM 139317.2, NM 022161.2, NM 022161.3, RefSeq: BC014475, NM 022161.4, NM 139317.3 **UniProt ID:** Q96CA5 Summary: This gene encodes a member of the inhibitor of apoptosis protein (IAP) family, and contains a single copy of a baculovirus IAP repeat (BIR) as well as a RING-type zinc finger domain. The BIR domain is essential for inhibitory activity and interacts with caspases, while the RING finger domain sometimes enhances antiapoptotic activity but does not inhibit apoptosis alone. Elevated levels of the encoded protein may be associated with cancer progression and play a role in chemotherapy sensitivity. Alternative splicing results in multiple transcript variants [provided by RefSeq, Jul 2013] These shRNA constructs were designed against multiple splice variants at this gene locus. To shRNA Design: be certain that your variant of interest is targeted, please contact techsupport@origene.com. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

### Serigene Livin (BIRC7) Human shRNA Plasmid Kit (Locus ID 79444) – TL306394

Performance Guaranteed: OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
