

Product datasheet for **TL306425V**

CTIP1 (BCL11A) Human shRNA Lentiviral Particle (Locus ID 53335)

Product data:

Product Type:	shRNA Lentiviral Particles
Product Name:	CTIP1 (BCL11A) Human shRNA Lentiviral Particle (Locus ID 53335)
Locus ID:	53335
Synonyms:	BCL11A-L; BCL11a-M; BCL11A-S; BCL11A-XL; CTIP1; DILOS; EVI9; HBFQTL5; ZNF856
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	BCL11A - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10 ⁷ TU/ml.
RefSeq:	NM_018014 , NM_022893 , NM_138552 , NM_138553 , NM_138559 , NM_018014.1 , NM_018014.2 , NM_018014.3 , NM_022893.1 , NM_022893.2 , NM_022893.3 , NM_138559.1 , NM_138553.1 , BC021098 , BC021098.1 , NM_001365609 , NM_001363864 , NM_138559.2
UniProt ID:	Q9H165
Summary:	This gene encodes a C2H2 type zinc-finger protein by its similarity to the mouse Bcl11a/Evi9 protein. The corresponding mouse gene is a common site of retroviral integration in myeloid leukemia, and may function as a leukemia disease gene, in part, through its interaction with BCL6. During hematopoietic cell differentiation, this gene is down-regulated. It is possibly involved in lymphoma pathogenesis since translocations associated with B-cell malignancies also deregulates its expression. Multiple transcript variants encoding several different isoforms have been found for this gene. [provided by RefSeq, Jul 2008]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact techsupport@origene.com . If you need a special design or shRNA sequence, please utilize our custom shRNA service .

**Performance
Guaranteed:**

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).

Product images:

GFP signal was observed under microscope at 48 hours after transduction of TL306425A virus into HEK293 cells. TL306425A virus was prepared using lenti-shRNA TL306425A and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of TL306425B virus into HEK293 cells. TL306425B virus was prepared using lenti-shRNA TL306425B and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL306425C] virus into HEK293 cells. [TL306425C] virus was prepared using lenti-shRNA [TL306425C] and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL306425D] virus into HEK293 cells. [TL306425D] virus was prepared using lenti-shRNA [TL306425D] and [TR30037] packaging kit.
