

Product datasheet for **TL306630V**

Apolipoprotein M (APOM) Human shRNA Lentiviral Particle (Locus ID 55937)

Product data:

Product Type:	shRNA Lentiviral Particles
Product Name:	Apolipoprotein M (APOM) Human shRNA Lentiviral Particle (Locus ID 55937)
Locus ID:	55937
Synonyms:	apo-M; G3a; HSPC336; NG20
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	APOM - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10 ⁷ TU/ml.
RefSeq:	NM_001256169 , NM_019101 , NR_045828 , NM_019101.1 , NM_019101.2 , NM_001256169.1 , BC020683 , BC020683.1 , NM_019101.3 , NM_001256169.2
UniProt ID:	O95445
Summary:	The protein encoded by this gene is an apolipoprotein and member of the lipocalin protein family. It is found associated with high density lipoproteins and to a lesser extent with low density lipoproteins and triglyceride-rich lipoproteins. The encoded protein is secreted through the plasma membrane but remains membrane-bound, where it is involved in lipid transport. Alternate splicing results in both coding and non-coding variants of this gene. [provided by RefSeq, Jan 2012]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact techsupport@origene.com . If you need a special design or shRNA sequence, please utilize our custom shRNA service .

**Performance
Guaranteed:**

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).

Product images:

GFP signal was observed under microscope at 48 hours after transduction of TL306630A virus into HEK293 cells. TL306630A virus was prepared using lenti-shRNA TL306630A and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of TL306630B virus into HEK293 cells. TL306630B virus was prepared using lenti-shRNA TL306630B and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL306630C] virus into HEK293 cells. [TL306630C] virus was prepared using lenti-shRNA [TL306630C] and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL306630D] virus into HEK293 cells. [TL306630D] virus was prepared using lenti-shRNA [TL306630D] and [TR30037] packaging kit.
