CCNO Human shRNA Plasmid Kit (Locus ID 10309)

Product data:

Product Type: shRNA Plasmids

Product Name: CCNO Human shRNA Plasmid Kit (Locus ID 10309)

Locus ID: 10309

Synonyms: UDG2, FLJ22422

Vector: pGFP-C-shLenti (TR30023)

E. coli Selection: Chloramphenicol (34 ug/ml)

Mammalian Cell

Selection:

Puromycin

Format: Lentiviral plasmids

Components: CCNO - Human, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID = 10309).

5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free.

RefSeq: NM 001024592, NM 021147, NR 125346, NR 125347, NR 125348, NM 021147.1,

NM 021147.2, NM 021147.3, NM 021147.4, NM 001024592.1, BC004877, BC017345,

BC056254, BC143905, BC143907, BC160041, NM 021147.5

UniProt ID: P22674

Summary: This gene encodes a member of the cyclin protein family, and the encoded protein is involved

in regulation of the cell cycle. Disruption of this gene is associated with primary ciliary

dyskinesia-19. Alternative splicing results in multiple transcript variants. This gene, which has

a previous symbol of UNG2, was erroneously identified as a uracil DNA glycosylase in

PubMed ID: 2001396. A later publication, PubMed ID: 8419333, identified this gene's product

as a cyclin protein family member. The UNG2 symbol is also used as a specific protein

isoform name for the UNG gene (GeneID 7374), so confusion exists in the scientific literature

and in some databases for these two genes. [provided by RefSeq, Jul 2014]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>.

If you need a special design or shRNA sequence, please utilize our custom shRNA service.

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
