

Product datasheet for TL309000V

SURF1 Human shRNA Lentiviral Particle (Locus ID 6834)

Product data:

| Product Type: | shRNA Lentiviral Particles |
|---------------|---|
| Product Name: | SURF1 Human shRNA Lentiviral Particle (Locus ID 6834) |
| Locus ID: | 6834 |
| Synonyms: | CMT4K; MC4DN1; SHY1 |
| Vector: | pGFP-C-shLenti (TR30023) |
| Format: | Lentiviral particles |
| Components: | SURF1 - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10^7 TU/ml. |
| RefSeq: | <u>NM_001280787, NM_003172, NM_003172.1, NM_003172.2, NM_003172.3, NM_001280787.1, BC071658, BC071658.1, BC028314, BM542342, NM_003172.4</u> |
| UniProt ID: | <u>Q15526</u> |
| Summary: | This gene encodes a protein localized to the inner mitochondrial membrane and thought to be involved in the biogenesis of the cytochrome c oxidase complex. The protein is a member of the SURF1 family, which includes the related yeast protein SHY1 and rickettsial protein RP733. The gene is located in the surfeit gene cluster, a group of very tightly linked genes that |
| | do not share sequence similarity, where it shares a bidirectional promoter with SURF2 on the opposite strand. Defects in this gene are a cause of Leigh syndrome, a severe neurological disorder that is commonly associated with systemic cytochrome c oxidase deficiency. [provided by RefSeq, Jul 2008] |

SURF1 Human shRNA Lentiviral Particle (Locus ID 6834) – TL309000V SURF1 Human shRNA Lentiviral Particle (Locus ID 6834) – TL309000V

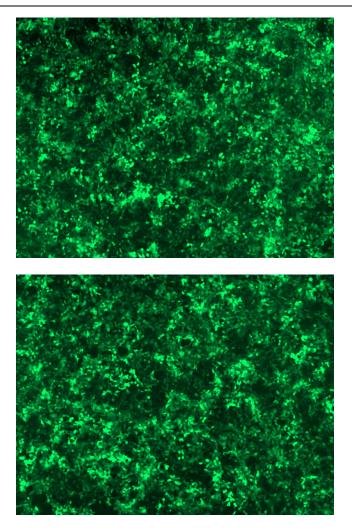

Performance Guaranteed: OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).

Product images:

GFP signal was observed under microscope at 48 hours after transduction of TL309000B virus into HEK293 cells. TL309000B virus was prepared using lenti-shRNA TL309000B and [TR30037] packaging kit.
