

Product datasheet for TL309120V

SRA1 Human shRNA Lentiviral Particle (Locus ID 10011)

Product data:

Product Type:	shRNA Lentiviral Particles
Product Name:	SRA1 Human shRNA Lentiviral Particle (Locus ID 10011)
Locus ID:	10011
Synonyms:	pp7684; SRA; SRAP; STRAA1
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	SRA1 - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10^7 TU/ml.
RefSeq:	<u>NM_001035235, NM_001253764, NR_045586, NR_045587, NM_001035235.1,</u> <u>NM_001035235.2, NM_001035235.3, NM_001253764.1, BC040043, BC067895, BC152788,</u> <u>BC156760</u>
UniProt ID:	<u>Q9HD15</u>
Summary:	Both long non-coding and protein-coding RNAs are transcribed from this gene, and they represent alternatively spliced transcript variants. This gene was initially defined as a non-coding RNA, which is a coactivator for several nuclear receptors (NRs) and is associated with breast cancer. It has now been found that this gene is involved in the regulation of many NR and non-NR activities, including metabolism, adipogenesis and chromatin organization. The long non-coding RNA transcripts interact with a variety of proteins, including the protein encoded by this gene. The encoded protein acts as a transcriptional repressor by binding to the non-coding RNA. [provided by RefSeq, Mar 2012]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u> . If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u> .

SRA1 Human shRNA Lentiviral Particle (Locus ID 10011) – TL309120V

Performance Guaranteed: OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
