Product datasheet for TL309181V

SorLA (SORL1) Human shRNA Lentiviral Particle (Locus ID 6653)

Product data:

Product Type:	shRNA Lentiviral Particles
Product Name:	SorLA (SORL1) Human shRNA Lentiviral Particle (Locus ID 6653)
Locus ID:	6653
Synonyms:	C11orf32; gp250; LR11; LRP9; SORLA; SorLA-1
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	SORL1 - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10^7 TU/ml.
RefSeq:	<u>NM_003105, NM_003105.1, NM_003105.2, NM_003105.3, NM_003105.4, NM_003105.5,</u> <u>BC032903, BC040643, BC137171, NM_003105.6</u>
UniProt ID:	<u>Q92673</u>
Summary:	This gene encodes a mosaic protein that belongs to at least two families: the vacuolar protein sorting 10 (VPS10) domain-containing receptor family, and the low density lipoprotein receptor (LDLR) family. The encoded protein also contains fibronectin type III repeats and an epidermal growth factor repeat. The encoded preproprotein is proteolytically processed to generate the mature receptor, which likely plays roles in endocytosis and sorting. Mutations in this gene may be associated with Alzheimer's disease. [provided by RefSeq, Feb 2016]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u> . If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u> .

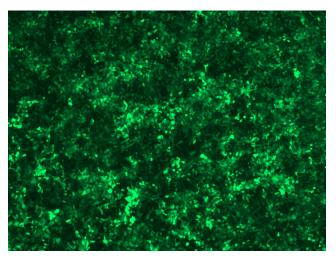

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

SorLA (SORL1) Human shRNA Lentiviral Particle (Locus ID 6653) – TL309181V

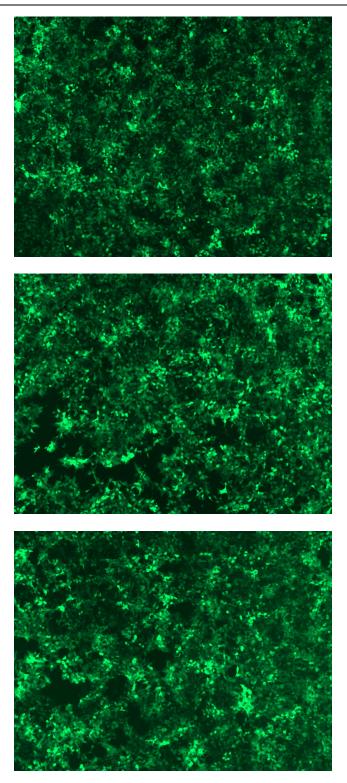

Performance Guaranteed: OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).

Product images:

GFP signal was observed under microscope at 48 hours after transduction of TL309181A virus into HEK293 cells. TL309181A virus was prepared using lenti-shRNA TL309181A and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of TL309181B virus into HEK293 cells. TL309181B virus was prepared using lenti-shRNA TL309181B and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL309181C] virus into HEK293 cells. [TL309181C] virus was prepared using lenti-shRNA [TL309181C] and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL309181D] virus into HEK293 cells. [TL309181D] virus was prepared using lenti-shRNA [TL309181D] and [TR30037] packaging kit.
