## **SNX15** Human shRNA Plasmid Kit (Locus ID 29907)

**Product data:** 

**Product Type:** shRNA Plasmids

**Product Name:** SNX15 Human shRNA Plasmid Kit (Locus ID 29907)

Chloramphenicol (34 ug/ml)

**Locus ID:** 29907

Synonyms: HSAF001435

**Vector:** pGFP-C-shLenti (TR30023)

Mammalian Cell Puromycin

Selection:

E. coli Selection:

Format: Lentiviral plasmids

**Components:** SNX15 - Human, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID = 29907).

5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free.

RefSeq: NM 013306, NM 147777, NM 013306.1, NM 013306.2, NM 013306.3, NM 013306.4,

NM 147777.1, NM 147777.2, NM 147777.3, BC014520, BC009897, BC012767, NM 013306.5,

NM 147777.4

UniProt ID: Q9NRS6

**Summary:** This gene encodes a member of the sorting nexin family. Members of this family contain a

phox (PX) domain, which is a phosphoinositide binding domain, and are involved in

intracellular trafficking. Overexpression of this gene results in a decrease in the processing of insulin and hepatocyte growth factor receptors to their mature subunits. This decrease is caused by the mislocalization of furin, the endoprotease responsible for cleavage of insulin and hepatocyte growth factor receptors. This protein is involved in endosomal trafficking from the plasma membrane to recycling endosomes or the trans-Golgi network. Alternative splicing results in multiple transcript variants. Read-through transcription also exists between this gene and the upstream ADP-ribosylation factor-like 2 (ARL2) gene. [provided by RefSeq,

Dec 2010]

**shRNA Design:** These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

## Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
