SBF1 Human shRNA Plasmid Kit (Locus ID 6305)

Product data:

Product Type: shRNA Plasmids

Product Name: SBF1 Human shRNA Plasmid Kit (Locus ID 6305)

Locus ID: 6305

Synonyms: CMT4B3; DENND7A; MTMR5

Vector: pGFP-C-shLenti (TR30023)

E. coli Selection: Chloramphenicol (34 ug/ml)

Mammalian Cell

Selection:

Puromycin

Format: Lentiviral plasmids

Components: SBF1 - Human, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID = 6305). 5µg

purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free.

RefSeq: NM 002972, NM 002972.1, NM 002972.2, NM 002972.3, BC009268, BC024101, BC040031,

BC046169, BC056915, BC087612, BC111424, BM975530, NM 001365819

UniProt ID: 095248

Summary: This gene encodes a member of the protein-tyrosine phosphatase family. However, the

encoded protein does not appear to be a catalytically active phosphatase because it lacks several amino acids in the catalytic pocket. This protein contains a Guanine nucleotide exchange factor (GEF) domain which is necessary for its role in growth and differentiation. Mutations in this gene have been associated with Charcot-Marie-Tooth disease 4B3.

Pseudogenes of this gene have been defined on chromosomes 1 and 8. [provided by RefSeq,

Dec 20141

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
