

Product datasheet for **TL309868V**

REST Human shRNA Lentiviral Particle (Locus ID 5978)

Product data:

Product Type:	shRNA Lentiviral Particles
Product Name:	REST Human shRNA Lentiviral Particle (Locus ID 5978)
Locus ID:	5978
Synonyms:	DFNA27; GINGF5; HGF5; NRSF; WT6; XBR
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	REST - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10 ⁷ TU/ml.
RefSeq:	NM_001193508 , NM_005612 , NM_005612.1 , NM_005612.2 , NM_005612.3 , NM_005612.4 , NM_001193508.1 , BC132859 , BC017822 , BC038985 , BC136491 , NM_001363453 , NM_005612.5
UniProt ID:	Q13127
Summary:	This gene was initially identified as a transcriptional repressor that represses neuronal genes in non-neuronal tissues. However, depending on the cellular context, this gene can act as either an oncogene or a tumor suppressor. The encoded protein is a member of the Kruppel-type zinc finger transcription factor family. It represses transcription by binding a DNA sequence element called the neuron-restrictive silencer element. The protein is also found in undifferentiated neuronal progenitor cells and it is thought that this repressor may act as a master negative regulator of neurogenesis. Alternatively spliced transcript variants have been described. [provided by RefSeq, May 2018]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact techsupport@origene.com . If you need a special design or shRNA sequence, please utilize our custom shRNA service .

**Performance
Guaranteed:**

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).

Product images:

GFP signal was observed under microscope at 48 hours after transduction of TL309868A virus into HEK293 cells. TL309868A virus was prepared using lenti-shRNA TL309868A and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of TL309868B virus into HEK293 cells. TL309868B virus was prepared using lenti-shRNA TL309868B and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL309868C] virus into HEK293 cells. [TL309868C] virus was prepared using lenti-shRNA [TL309868C] and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL309868D] virus into HEK293 cells. [TL309868D] virus was prepared using lenti-shRNA [TL309868D] and [TR30037] packaging kit.
