

Product datasheet for **TL309896V**

RBPMs Human shRNA Lentiviral Particle (Locus ID 11030)

Product data:

Product Type:	shRNA Lentiviral Particles
Product Name:	RBPMs Human shRNA Lentiviral Particle (Locus ID 11030)
Locus ID:	11030
Synonyms:	HERMES
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	RBPMs - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10 ⁷ TU/ml.
RefSeq:	NM_001008710 , NM_001008711 , NM_001008712 , NM_006867 , NM_001008712.1 , NM_001008712.2 , NM_001008710.1 , NM_001008710.2 , NM_001008711.1 , NM_001008711.2 , NM_006867.1 , NM_006867.3 , BC003608 , BC003608.2 , BC063494 , BC092476 , NM_006867.4 , NM_001008711.3 , NM_001008710.3
UniProt ID:	Q93062
Summary:	This gene encodes a member of the RNA recognition motif family of RNA-binding proteins. The RNA recognition motif is between 80-100 amino acids in length and family members contain one to four copies of the motif. The RNA recognition motif consists of two short stretches of conserved sequence, as well as a few highly conserved hydrophobic residues. The encoded protein has a single, putative RNA recognition motif in its N-terminus. Alternative splicing results in multiple transcript variants encoding different isoforms. [provided by RefSeq, Jun 2013]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact techsupport@origene.com . If you need a special design or shRNA sequence, please utilize our custom shRNA service .

**Performance
Guaranteed:**

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
