

Product datasheet for **TL309905V**

RBMS3 Human shRNA Lentiviral Particle (Locus ID 27303)

Product data:

Product Type:	shRNA Lentiviral Particles
Product Name:	RBMS3 Human shRNA Lentiviral Particle (Locus ID 27303)
Locus ID:	27303
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	RBMS3 - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10 ⁷ TU/ml.
RefSeq:	NM_001003792 , NM_001003793 , NM_001177711 , NM_001177712 , NM_014483 , NM_001003793.1 , NM_001003793.2 , NM_014483.1 , NM_014483.2 , NM_014483.3 , NM_001003792.1 , NM_001003792.2 , NM_001177711.1 , NM_001177712.1 , BC117315 , BC143521 , NM_001330696 , NM_001003793.3 , NM_001003792.3 , NM_001177711.2
UniProt ID:	Q6XE24
Summary:	This gene encodes an RNA-binding protein that belongs to the c-myc gene single-strand binding protein family. These proteins are characterized by the presence of two sets of ribonucleoprotein consensus sequence (RNP-CS) that contain conserved motifs, RNP1 and RNP2, originally described in RNA binding proteins, and required for DNA binding. These proteins have been implicated in such diverse functions as DNA replication, gene transcription, cell cycle progression and apoptosis. The encoded protein was isolated by virtue of its binding to an upstream element of the alpha2(I) collagen promoter. The observation that this protein localizes mostly in the cytoplasm suggests that it may be involved in a cytoplasmic function such as controlling RNA metabolism, rather than transcription. Multiple alternatively spliced transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Apr 2010]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact techsupport@origene.com . If you need a special design or shRNA sequence, please utilize our custom shRNA service .

**Performance
Guaranteed:**

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).

Product images:

GFP signal was observed under microscope at 48 hours after transduction of TL309905A virus into HEK293 cells. TL309905A virus was prepared using lenti-shRNA TL309905A and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of TL309905B virus into HEK293 cells. TL309905B virus was prepared using lenti-shRNA TL309905B and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL309905C] virus into HEK293 cells. [TL309905C] virus was prepared using lenti-shRNA [TL309905C] and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL309905D] virus into HEK293 cells. [TL309905D] virus was prepared using lenti-shRNA [TL309905D] and [TR30037] packaging kit.
