Product datasheet for TL310628

LIS1 (PAFAH1B1) Human shRNA Plasmid Kit (Locus ID 5048)

Product data:

Product Type:	shRNA Plasmids
Product Name:	LIS1 (PAFAH1B1) Human shRNA Plasmid Kit (Locus ID 5048)
Locus ID:	5048
Synonyms:	LIS1; LIS2; MDCR; MDS; NudF; PAFAH
Vector:	pGFP-C-shLenti (TR30023)
E. coli Selection:	Chloramphenicol (34 ug/ml)
Mammalian Cell Selection:	Puromycin
Format:	Lentiviral plasmids
Components:	PAFAH1B1 - Human, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID = 5048). 5µg purified plasmid DNA per construct 29-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free.
RefSeq:	<u>NM 000430, NM 000430.1, NM 000430.2, NM 000430.3, BC064638, NM 000430.4</u>
UniProt ID:	<u>P43034</u>
Summary:	This locus was identified as encoding a gene that when mutated or lost caused the lissencephaly associated with Miller-Dieker lissencephaly syndrome. This gene encodes the non-catalytic alpha subunit of the intracellular lb isoform of platelet-activating factor acteylhydrolase, a heterotrimeric enzyme that specifically catalyzes the removal of the acetyl group at the SN-2 position of platelet-activating factor (identified as 1-O-alkyl-2-acetyl-sn-glyceryl-3-phosphorylcholine). Two other isoforms of intracellular platelet-activating factor acetylhydrolase exist: one composed of multiple subunits, the other, a single subunit. In
	addition, a single-subunit isoform of this enzyme is found in serum. [provided by RefSeq, Apr 2009]

Serigene LIS1 (PAFAH1B1) Human shRNA Plasmid Kit (Locus ID 5048) – TL310628

Performance Guaranteed: OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
