

Product datasheet for **TL311284V**

KAT7 Human shRNA Lentiviral Particle (Locus ID 11143)

Product data:

Product Type:	shRNA Lentiviral Particles
Product Name:	KAT7 Human shRNA Lentiviral Particle (Locus ID 11143)
Locus ID:	11143
Synonyms:	HBO1; HBOA; MYST2; ZC2HC7
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	MYST2 - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10 ⁷ TU/ml.
RefSeq:	NM_001199155 , NM_001199156 , NM_001199157 , NM_001199158 , NM_007067 , NM_001346706 , NM_007067.1 , NM_007067.2 , NM_007067.3 , NM_007067.4 , NM_001199158.1 , NM_001199156.1 , NM_001199157.1 , NM_001199155.1 , BC032640 , BC032640.2 , BC015485
UniProt ID:	O95251
Summary:	The protein encoded by this gene is part of the multimeric HBO1 complex, which possesses histone H4-specific acetyltransferase activity. This activity is required for functional replication origins and is involved in transcriptional activation of some genes. In both cases, the acetylation of histone H4 helps unfold chromatin so that the DNA can be accessed and replicated or transcribed. [provided by RefSeq, Oct 2016]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact techsupport@origene.com . If you need a special design or shRNA sequence, please utilize our custom shRNA service .

**Performance
Guaranteed:**

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).

Product images:

GFP signal was observed under microscope at 48 hours after transduction of TL311284B virus into HEK293 cells. TL311284B virus was prepared using lenti-shRNA TL311284B and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL311284C] virus into HEK293 cells. [TL311284C] virus was prepared using lenti-shRNA [TL311284C] and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL311284D] virus into HEK293 cells. [TL311284D] virus was prepared using lenti-shRNA [TL311284D] and [TR30037] packaging kit.
