KRT13 Human shRNA Plasmid Kit (Locus ID 3860)

Product data:

Product Type: shRNA Plasmids

Product Name: KRT13 Human shRNA Plasmid Kit (Locus ID 3860)

Locus ID: 3860

Synonyms: CK13; K13; WSN2

Vector: pGFP-C-shLenti (TR30023)

E. coli Selection: Chloramphenicol (34 ug/ml)

Puromycin

Lentiviral plasmids

Mammalian Cell

Format:

Selection:

Components: KRT13 - Human, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID = 3860).

5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free.

RefSeq: NM 002274, NM 153490, NM 153490.1, NM 153490.2, NM 002274.1, NM 002274.2,

NM 002274.3, BC002661, BC002661.2, BC077718, BC126184, BC136494

UniProt ID: P13646

Summary: The protein encoded by this gene is a member of the keratin gene family. The keratins are

intermediate filament proteins responsible for the structural integrity of epithelial cells and are subdivided into cytokeratins and hair keratins. Most of the type I cytokeratins consist of

acidic proteins which are arranged in pairs of heterotypic keratin chains. This type I

cytokeratin is paired with keratin 4 and expressed in the suprabasal layers of non-cornified stratified epithelia. Mutations in this gene and keratin 4 have been associated with the autosomal dominant disorder White Sponge Nevus. The type I cytokeratins are clustered in a region of chromosome 17q21.2. Alternative splicing of this gene results in multiple transcript

variants; however, not all variants have been described. [provided by RefSeq, Jul 2008]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>.

If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
