## Kallikrein 2 (KLK2) Human shRNA Plasmid Kit (Locus ID 3817)

#### **Product data:**

**Product Type:** shRNA Plasmids

Product Name: Kallikrein 2 (KLK2) Human shRNA Plasmid Kit (Locus ID 3817)

Locus ID: 3817

**Synonyms:** hGK-1; hK2; KLK2A2

Vector: pGFP-C-shLenti (TR30023)

E. coli Selection: Chloramphenicol (34 ug/ml)

Mammalian Cell

ian Ceii P

Selection:

Puromycin

Format: Lentiviral plasmids

Components: KLK2 - Human, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID = 3817). 5µg

purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free.

RefSeq: NM 001002231, NM 001002232, NM 001256080, NM 005551, NR 045762, NR 045763,

NM 005551.1, NM 005551.2, NM 005551.3, NM 005551.4, NM 001002231.1,

NM 001002231.2, NM 001256080.1, NM 001002232.1, BC005196, NM 001002231.3

UniProt ID: P20151

**Summary:** This gene encodes a member of the grandular kallikrein protein family. Kallikreins are a

subgroup of serine proteases that are clustered on chromosome 19. Members of this family are involved in a diverse array of biological functions. The protein encoded by this gene is a highly active trypsin-like serine protease that selectively cleaves at arginine residues. This protein is primarily expressed in prostatic tissue and is responsible for cleaving pro-prostate-specific antigen into its enzymatically active form. This gene is highly expressed in prostate tumor cells and may be a prognostic maker for prostate cancer risk. Alternate splicing results

in both coding and non-coding transcript variants. [provided by RefSeq, Jan 2012]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our custom shRNA service.

# Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
