

## Product datasheet for **TL312121V**

### **IQGAP1 Human shRNA Lentiviral Particle (Locus ID 8826)**

#### **Product data:**

<b>Product Type:</b>	shRNA Lentiviral Particles
<b>Product Name:</b>	IQGAP1 Human shRNA Lentiviral Particle (Locus ID 8826)
<b>Locus ID:</b>	8826
<b>Synonyms:</b>	HUMORFA01; p195; SAR1
<b>Vector:</b>	pGFP-C-shLenti (TR30023)
<b>Format:</b>	Lentiviral particles
<b>Components:</b>	IQGAP1 - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10 <sup>7</sup> TU/ml.
<b>RefSeq:</b>	<a href="#">NM_003870</a> , <a href="#">NM_003870.1</a> , <a href="#">NM_003870.2</a> , <a href="#">NM_003870.3</a> , <a href="#">BC005906</a> , <a href="#">BC016714</a> , <a href="#">BC020549</a> , <a href="#">BC037425</a> , <a href="#">BC064971</a> , <a href="#">BC089385</a> , <a href="#">BC110811</a> , <a href="#">BC139731</a> , <a href="#">BC151834</a> , <a href="#">NM_003870.4</a>
<b>UniProt ID:</b>	<a href="#">P46940</a>
<b>Summary:</b>	This gene encodes a member of the IQGAP family. The protein contains four IQ domains, one calponin homology domain, one Ras-GAP domain and one WW domain. It interacts with components of the cytoskeleton, with cell adhesion molecules, and with several signaling molecules to regulate cell morphology and motility. Expression of the protein is upregulated by gene amplification in two gastric cancer cell lines. [provided by RefSeq, Jul 2008]
<b>shRNA Design:</b>	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact <a href="mailto:techsupport@origene.com">techsupport@origene.com</a> . If you need a special design or shRNA sequence, please utilize our <a href="#">custom shRNA service</a> .

**Performance  
Guaranteed:**

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at [techsupport@origene.com](mailto:techsupport@origene.com). Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
