

Product datasheet for TL312354V

HOXC6 Human shRNA Lentiviral Particle (Locus ID 3223)

Product data:

Product Type:	shRNA Lentiviral Particles
Product Name:	HOXC6 Human shRNA Lentiviral Particle (Locus ID 3223)
Locus ID:	3223
Synonyms:	CP25; HHO.C8; HOX3; HOX3C
Vector:	pGFP-C-shLenti (TR30023)
Format:	Lentiviral particles
Components:	HOXC6 - Human shRNA lentiviral particles (4 unique 29mer target-specific shRNA, 1 scramble control), 0.5 ml each, >10^7 TU/ml.
RefSeq:	<u>NM 004503, NM 153693, NM 153693.1, NM 153693.2, NM 153693.3, NM 153693.4,</u> <u>NM 004503.1, NM 004503.2, NM 004503.3, BC074845, BC074845.2, BC074844, NM 153693.5,</u> <u>NM 004503.4</u>
UniProt ID:	<u>P09630</u>
Summary:	This gene belongs to the homeobox family, members of which encode a highly conserved family of transcription factors that play an important role in morphogenesis in all multicellular organisms. Mammals possess four similar homeobox gene clusters, HOXA, HOXB, HOXC and HOXD, which are located on different chromosomes and consist of 9 to 11 genes arranged in tandem. This gene, HOXC6, is one of several HOXC genes located in a cluster on chromosome 12. Three genes, HOXC5, HOXC4 and HOXC6, share a 5' non-coding exon. Transcripts may include the shared exon spliced to the gene-specific exons, or they may include only the gene-specific exons. Alternatively spliced transcript variants encoding different isoforms have been identified for HOXC6. Transcript variant two includes the shared exon, and transcript variant one includes only gene-specific exons. [provided by RefSeq, Jul 2008]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u> . If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u> .

GRIGENE HOXC6 Human shRNA Lentiviral Particle (Locus ID 3223) – TL312354V

Performance Guaranteed: OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
