

Product datasheet for **TL312614**

GRIK1 Human shRNA Plasmid Kit (Locus ID 2897)

Product data:

Product Type:	shRNA Plasmids
Product Name:	GRIK1 Human shRNA Plasmid Kit (Locus ID 2897)
Locus ID:	2897
Synonyms:	EAA3; EEA3; GLR5; GluK1; gluR-5; GLUR5
Vector:	pGFP-C-shLenti (TR30023)
E. coli Selection:	Chloramphenicol (34 ug/ml)
Mammalian Cell Selection:	Puromycin
Format:	Lentiviral plasmids
Components:	GRIK1 - Human, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID = 2897). 5µg purified plasmid DNA per construct 29-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free.
RefSeq:	NM_000830 , NM_175611 , NM_001320616 , NM_001320618 , NM_001320621 , NM_001320630 , NM_001330993 , NM_001330994 , NM_175611.1 , NM_175611.2 , NM_000830.1 , NM_000830.2 , NM_000830.4 , BC028238 , BC039447 , BC111793 , BC152727 , BC156975 , NM_000830.5 , NM_175611.3
UniProt ID:	P39086
Summary:	Glutamate receptors are the predominant excitatory neurotransmitter receptors in the mammalian brain and are activated in a variety of normal neurophysiologic processes. This gene product belongs to the kainate family of glutamate receptors, which are composed of four subunits and function as ligand-activated ion channels. The subunit encoded by this gene is subject to RNA editing (CAG->CGG; Q->R) within the second transmembrane domain, which is thought to alter the properties of ion flow. Alternative splicing, resulting in transcript variants encoding different isoforms, has been noted for this gene. [provided by RefSeq, Jul 2008]
shRNA Design:	These shRNA constructs were designed against multiple splice variants at this gene locus. To be certain that your variant of interest is targeted, please contact techsupport@origene.com . If you need a special design or shRNA sequence, please utilize our custom shRNA service .

**Performance
Guaranteed:**

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).
