GAPDHS Human shRNA Plasmid Kit (Locus ID 26330)

Product data:

Product Type: shRNA Plasmids

Product Name: GAPDHS Human shRNA Plasmid Kit (Locus ID 26330)

Locus ID: 26330

Synonyms: GAPD2; GAPDH-2; GAPDS; HEL-S-278; HSD-35

Vector:pGFP-C-shLenti (TR30023)E. coli Selection:Chloramphenicol (34 ug/ml)

Mammalian Cell

Selection:

Puromycin

Format: Lentiviral plasmids

Components: GAPDHS - Human, 4 unique 29mer shRNA constructs in lentiviral GFP vector(Gene ID =

26330). 5µg purified plasmid DNA per construct

29-mer scrambled shRNA cassette in pGFP-C-shLenti Vector, TR30021, included for free.

RefSeq: NM 014364, NM 014364.1, NM 014364.2, NM 014364.3, NM 014364.4, BC036373,

BC036373.2, NM 014364.5

UniProt ID: 014556

Summary: This gene encodes a protein belonging to the glyceraldehyde-3-phosphate dehydrogenase

family of enzymes that play an important role in carbohydrate metabolism. Like its somatic

cell counterpart, this sperm-specific enzyme functions in a nicotinamide adenine

dinucleotide-dependent manner to remove hydrogen and add phosphate to glyceraldehyde 3-phosphate to form 1,3-diphosphoglycerate. During spermiogenesis, this enzyme may play an important role in regulating the switch between different energy-producing pathways, and

it is required for sperm motility and male fertility. [provided by RefSeq, Jul 2008]

shRNA Design: These shRNA constructs were designed against multiple splice variants at this gene locus. To

be certain that your variant of interest is targeted, please contact <u>techsupport@origene.com</u>. If you need a special design or shRNA sequence, please utilize our <u>custom shRNA service</u>.

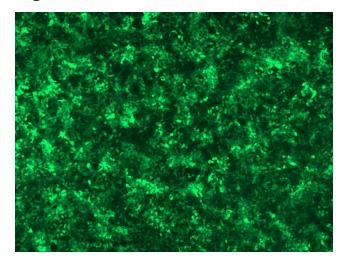

Performance Guaranteed:

OriGene guarantees that the sequences in the shRNA expression cassettes are verified to correspond to the target gene with 100% identity. One of the four constructs at minimum are guaranteed to produce 70% or more gene expression knock-down provided a minimum transfection efficiency of 80% is achieved. Western Blot data is recommended over qPCR to evaluate the silencing effect of the shRNA constructs 72 hrs post transfection. To properly assess knockdown, the gene expression level from the included scramble control vector must be used in comparison with the target-specific shRNA transfected samples.

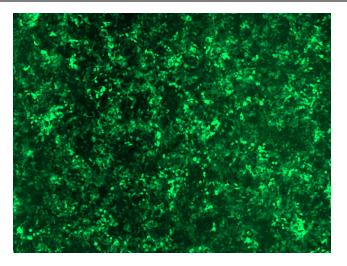

For non-conforming shRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the shRNA kit. To arrange for a free replacement with newly designed constructs, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled shRNA control (Western Blot data preferred).

Product images:

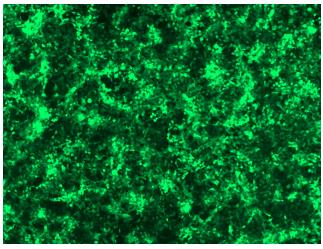

GFP signal was observed under microscope at 48 hours after transduction of TL312840A virus into HEK293 cells. TL312840A virus was prepared using lenti-shRNA TL312840A and [TR30037] packaging kit.

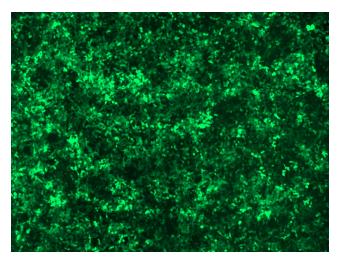

GFP signal was observed under microscope at 48 hours after transduction of TL312840B virus into HEK293 cells. TL312840B virus was prepared using lenti-shRNA TL312840B and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL312840C] virus into HEK293 cells. [TL312840C] virus was prepared using lenti-shRNA [TL312840C] and [TR30037] packaging kit.

GFP signal was observed under microscope at 48 hours after transduction of [TL312840D] virus into HEK293 cells. [TL312840D] virus was prepared using lenti-shRNA [TL312840D] and [TR30037] packaging kit.
